

HI MICHAEL, IT'S ME AGAIN!

0:00 / 1:58

The speaker explains that one of the problems is ...

- The number of tasks exceeds the number of employees.
- The development of proactive responses to different scenarios.
- The location of the desks in the office.
- The relationship with the managers is getting better.

Pregunta 2

THE PERSIAN EMPIRE

▶ 1:34 / 1:34 ━━━━ 🔍 ⏰

What did Darius the Great identify as imperative for efficiency?

- An extensive well-trained army.
- A firm military strategy to conquer more for the Empire.
- Collection of meaningful tribute money.
- Properly structured areas with a vast communication system.

→  Pasar a otra pregunta le impedirá revisar.

→  Pasar a otra pregunta le impedirá realizar cambios

Pregunta 3

CHRISTMAS TIME!

1:11 / 1:11

Before 8:30, they...

- feast on turkey and sing some carols.
- recite some prayers, read the bible and hold a ceremony
- prepare turkey and chocolate milk.
- call up their relatives and friends.

→  Pasar a otra pregunta le impedirá realizar cambios

→  Pasar a otra pregunta le impedirá realizar cambios.

Pregunta 4

THE BIG ONE

▶ 2:55 / 2:55   

What is a "Go Bag"?

- A large bag of food.
- Something used to carry household belongings.
- A bag prepared for emergency situations.
- An emergency first aid kit.

WILDFIRES

2:57 / 2:57

Where do wildfires occur?

- Mostly in the southern continent
- Only in a rural setting
- In vegetation of the countryside

 Pasar a otra pregunta le impedirá realizar ~~comer~~

Pregunta 6

THE DIVE

II 0:02 / 3:27

How long was the diver dead?

- 3 minutes 24 seconds
- Approximately 4 minutes
- Approximately 5 minutes
- 12 minutes

↓ Estado de finalización de la pregunta

Pregunta 7

LEARN TO DO SOMETHING BEFORE THE AGE OF FIFTY

II 0:03 / 0:46 🔍 ⏰

What does the speaker try to say in the first part of her presentation?

- It is an uphill learning experience as you age.
- How skillful elders are.
- The older you are, the easier you learn.
- If you learn easily, flaunt it!

OVERWHELMED

0:03 / 2:00

How does the speaker feel?

- Overpowered by vexation.
- Over the moon.
- Bewildered.
- Miserable.

A TRUCKER'S TALE

0:02 / 2:48

In what season does the story take place?

- Summer
- Winter
- Spring
- Fall

Pregunta 10

WHO IS IDA?

II 0:01 / 2:34

Who is Ida?

- The world's best-preserved fossil.
- A cat that perished 47 million years ago.
- A specimen usually compared to "Lucy".
- The only primate fossil with 90% completeness.

Pasar >

II 0:07 / 1:28

According to the speaker, ...

- in her nation, you won't be perceived as disrespectful unless you greet everyone when you meet them.
- it's usual to be invited to have dinner at friends' homes.
- in her country, journeys are quite uncomfortable for elders and pregnant women.
- she's convinced that all her dreams will come true.

CORNER THE GRAIN MARKET

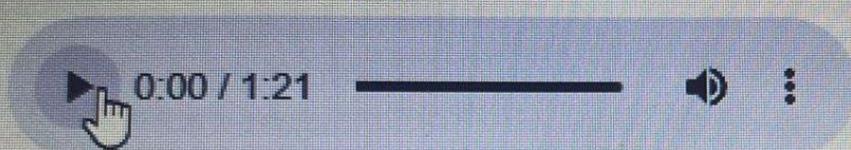

0:23 / 1:56

According to the speaker, what is true about the sale of goods to other countries in QSF?

- The logistic operator synchronizes the purchases of products.
- The company is exporting hundreds of tons.
- It doesn't fulfill the customer needs.
- The size of operations is smaller than FSL's.

PODCAST: COUNTRIES AROUND!

Based on the podcast, ...

- shopping in the USA is crucial for everyone.
- most airports might be disturbing for people of all ages.
- in the USA you get the best slice of bread in the world!
- this country will definitely live up to all people of all ages' expectations.

THE NORMAN CONQUEST

0:00 / 2:52

What bolstered the French influence in the English language?

- The political situation in France.
- France and the rest of Europe interested William.
- William had several French noblemen by his side.
- French was introduced to the elite English society.

THE CREATORS OF GRAMMAR

0:00 / 2:07

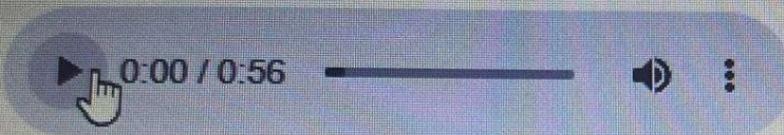

In this specific context, the term “from scratch” is closest in meaning to:

- by copying something else.
- in simple cultures.
- from the very beginning.
- by using written information.

A MAN GIVING HIS POINT OF VIEW

0:00 / 0:44

:

What is the man talking about?

- Conventional and alternative or natural medicine
- Education
- Agriculture
- Covid 19

DANGERS OF HOUSEHOLD CHEMICALS

0:00 / 3:24

⋮

How old was the boy's mother?

- 23.
- 22.
- 33.
- It is not mentioned.

RISK-TAKING AND THE MONKEY ECONOMY

0:00 / 2:18

The results of the experiment showed...

- Brown Capuchin monkeys are better at taking financial decisions.
- Laurie Santos' first theory was correct.
- Laurie Santos' second theory was correct.
- Humans are able to overcome financial limitations.

Pregunta 21**1 puntos** Guardar respuesta**A STEP FORWARD**

I resigned from Royals on January 5th of this year, and I joined Berkshire last March 10th. My previous workplace was far from home, and I wasted a lot of time arriving there. I used to commute on a crowded train where I didn't even have the chance to read a small book. Every day, I felt at my wits' end. Changes in the organization structure were more frequent than at my current workplace, which made it feel unstable.

I'm happy with my new job. My new office is closer to my house. It takes ten minutes on foot or five by car, which allows me to have lunch with my son. Also, there are a lot of projects and goals to achieve, which makes this new job more interesting than the previous one. This new job is the most challenging that I have ever had, but that hasn't stopped me from proposing many tools to improve our processes. That is why I have planned to reach goals before the expected deadline.

I've heard that Berkshire opened in Peru as a subsidiary in 2020, and that it started as a small enterprise, but now its sales have grown. There is an expectation to launch biological products, and this expected launch of new products will be good for the company sales. It will leave its mark with an incredible performance of the leaders. If this happens, the company will be more profitable than its Saudi Arabian competitors.

What will be the impact of the new product launch?

- It will go against the main processes.
- It will have a meaningful effect on sales.
- It will allow the writer to meet the deadlines.
- It will be fruitless.

Pregunta 22**Untitled 8****1 puntos**

Guardar respuesta

Have you ever felt "If you want something done right, you got to do it yourself?" In any context, this can be a catastrophic thought. If you feel this way sometimes, you are missing a key ingredient to an effective work relationship: Synergy

The term "synergetics" was coined by Haken [1977] to refer to the study of processes by which organizations on different levels (physical, chemical, biological, social) develop emergent properties through synergetic (cooperative) interactions of many elements of the same kind, or few elements of different kinds.

There exist some factors that can promote or prevent synergy at any level in people's lives. Let us focus on how to be productive when working or studying. Amongst the first we have the importance of knowing the strengths and weaknesses of each individual on your team. No single person is an expert at everything. It is ideal to place team members together to complement one another.

Brainstorming and exchanging ideas gives teammates a sense of belonging and a feeling that their input can shape the outcome of the task or project. Having a goal drives motivation. When breaking down a task into smaller, manageable parts, the responsible ones should know their impact on the final goal and that their efforts will be rewarded when the task is handed in.

It is crucial for team members to know how the task or project is going. Discussing feedback from teachers and any small milestone reached helps keep everybody working with an eye on the goal. It is critical that you stay objective and demonstrate accountability fairly. Playing favorites would lead to losing interest or simply stop caring.

The term "synergetics" was coined by Haken [1977] to refer to the study of processes by which organizations on different levels (physical, chemical, biological, social) develop emergent properties through synergetic (cooperative) interactions of many elements of the same kind, or few elements of different kinds.

It is crucial for team members to know how the task or project is going. Discussing feedback from teachers and any small milestone reached helps keep everybody working with an eye on the goal. It is critical that you stay objective and demonstrate accountability fairly. Playing favorites would lead to losing interest or simply stop caring.

The task is complete, and the teacher is happy. Just another day at school? Perhaps, but make sure you celebrate the victories as a team as well.

The third paragraph lies on the principle of...

- Enhancing communication
- Listening to one another
- Knowing your team
- Playing it fair at all costs

BIOGRAPHY

Ronald Karp (1980 - 2000) was an American actor. He was born in Kansas City, Missouri. He studied at Park Hill High School and lived with his parents and his young sister until 2000. In the early years, there was some sort of sibling rivalry but then everything was hunky-dory. Ronald trained as a dancer from an early age, his favorite dance style was breakdancing. He was unflagging in his efforts; that is how then he landed a job in acting.

His first appearance in a film was in a horror movie called "Mirrors", where he played the nephew of the lead. But the role that would lead him to fame appeared in 1996. In September of that year, he was cast in the starring role of Jean Road on the Hulu drama series "Brooklyn". All the actors hit it off immediately.

Three years later, he got another leading role at Paramount, but now in a movie. He became one of the main cast members of Descendants, playing Robert, the son of Kendra. He later reprised the character for the sequels and a spin-off.

Ronald Karp died in 2000 due to an epileptic seizure. When he passed away, his family started a foundation named after him. This foundation will provide kids with a few resources the necessary help to get into the performing arts.

What was the impact of Karp's death?

- People learned about preventing epileptic seizures.
- Children mourned Karp.
- A foundation was established by Karp's acquaintances.
- An endowment for minors in need of access to performing arts.

MODERN CRUISE INDUSTRY

The modern cruise industry consists of massive 2,500 passenger cruise ships equipped with facilities and amenities ranging from amazing robotic cocktail lounges to innovative platforms to view awe-inspiring water shows. There are also smaller more luxurious private vessels allowing the industry to offer an option for everyone, which surpasses the expectations of its' clients. The smaller vessels, such as; yachts and sail boats, carry from 10 to a few 100 passengers to remote exotic destinations as well as regulated ports which do not allow larger ships due to the potential inundation that thousands of tourists would have on the local environment. In this day and age, it has become a thriving industry.

Since the days of transoceanic transportation and tropical vacations, which were only available to the realm of society's elite, the cruise industry has gone through a multitude of significant changes. Now it is not only for the elite, but it has become a modern multi-million-dollar tourism and leisure industry that offers an affordable vacation option for the average person and a level of comfort difficult to match, with a growing number of people taking cruises that appears to be increasing every year around the world.

Whether you have been on a vessel or not, it is possible you may remember the popular TV series "The Love boat" staged on the luxury passenger cruise ship MS Pacific Princess, two of whose regular ports of call were Puerto Vallarta and Acapulco. The series was part of ABC's well received Saturday night programing from 1976 to 1990.

These days a relatively smaller number of cruise companies compete for world market shares. They do this in different ways, by developing innovative commercial strategies and investing multi-million dollar budgets in the research and development of ultramodern vessels able to combine the elegance of high quality living spaces with cutting-edge technological ideas, needed to provide stability to these new floating hotels, pushing the boundaries of naval construction and design to the limits for exceptional navigation performance and living aboard in comfort while maintaining the highest standards for safety and environmental management systems.

What can be concluded from paragraph 4?

- The modern cruise experience can be conceptualized from different perspectives.
- The world market for cruise ships is a rather small one.
- Cruise ships offer high standards of onboard comfort as well as safety.
- The vessels are designed to satisfy the most varied preferences and expectations.

MONKEYPOX

1 puntos Guardar respuesta

Monkeypox is a rare, little-known disease, which is normally spread by infected wild animals in Africa, and it's being investigated in European countries including the UK, as well as in the US, Canada and Australia.

It's now known that this disease is caused by the monkeypox virus, which is a smallpox-like virus, but it is much less severe, and experts say that chances of infection are low. Monkeypox was first discovered in 1958 when outbreaks of this disease were discovered in monkeys held in captivity for research; however, it was first seen in humans in 1970 in the Democratic Republic of the Congo, and it is now endemic in Central and West Africa.

It's seen mostly in remote parts of central and west African countries, near tropical rainforests, where there have been more than 1,200 cases of monkeypox since the start of the current year, and so far, two main strains of the virus have been identified: west African and central African, and it's the one from west Africa which is milder and is now spreading to other regions of the world.

In the UK, there have been around 2,800 confirmed cases in recent weeks. The first case on 7 May 2022 is thought to have been brought into the UK by a traveler who returned from Nigeria. A week later, two more had been diagnosed with monkeypox, and health authorities said that they were not related to the initial case.

Infections are usually mild and the risk to the general population is low; however, the UK government has bought more than 100,000 doses of smallpox vaccine to try to fight monkeypox since it was key to eradicating smallpox decades ago, and so it can be highly effective – around 85% – in preventing monkeypox.

Symptoms generally show between five and 13 days after infection, even though it can take up to 21 days for them to appear. Some of the early symptoms are fever, headache, backache, muscle ache, swollen lymph nodes, chills and exhaustion. Once fever has appeared, a rash tends to first erupt on the face, hands and feet before spreading to other areas of the body such as the inside of the mouth, the genitals and the cornea. Symptoms often ease within a month, though one in ten cases can be fatal, and children are particularly susceptible.

It normally spreads to people from infected wild animals like rodents and primates, but human-to-human transmission can also happen in close proximity by contact.

start of the current year, and so far, two main strains of the virus have been identified: west African and central African, and it's the one from the latter that's causing the most concern. It's more severe than the former, which is milder and is now spreading to other regions of the world.

GROWING UP IN THE 1980S IN LONDON

Growing up in the 1980s in London, Troi Lee was surrounded by music, with "speakers on the street corners blaring." After getting a Walkman for his 14th birthday, he would wander through his neighborhood playing songs by Public Enemy on repeat: "It was pure joy," he says. This passion led Lee to follow in the footsteps of his cousin John and become a DJ. It's a common enough path – except that Lee was born severely deaf. With his hearing aids in a specific setting, he could hear certain sounds from his Walkman through a magnetic wireless signal. These sounds included the bass vibrations from the percussion and glimpses of lyrics. When DJing, Lee, now a middle-aged adult, uses digital software to visualize and enjoy the instrumental elements that he mixes together.

Sound is a vibration that travels in invisible waves. Our bodies can detect these vibrations, sending that information to the brain, because sound travels through us too. In the brain, a part called the auditory cortex is responsible for analyzing sound in a person who can hear. The sensory cortex is another part that helps a person recognize sound vibrations, whether that person can hear, is hard of hearing, or is deaf. Sound waves are measured in frequency, which is the number of waves passing a given point in a certain amount of time.

The idea that deafness gets in the way of the appreciation of music is gradually being debunked. In 2013, sign language interpreter Amber Galloway Gallego went viral in the United States for her animated performance for rapper Kendrick Lamar at the Lollapalooza music festival in Chicago, Illinois. Rather than merely signing the words, she embodies musical textures with her face and movements, showcasing a unique technique. To represent bass, she places her arms in front of the lower part of her body and inflates her face, replicating the sign for "fat," while higher frequencies are placed at head height and above. With about two to three of every 1,000 children in the U.S. born profoundly deaf, the lack of accessibility to live music for people who are deaf and hard of hearing is a significant challenge, and many of these fans believe too little is being done to serve their needs. "I don't go to live shows very often as they're not that accessible," says writer Rebecca Withey, who is profoundly deaf. For some fans, difficulties around access can put an end to nights out altogether. "Being ignored by the music industry has made me disengage from live music," says journalist and filmmaker Charlie Swinbourne, who is deaf.

Small steps are being made toward inclusivity: for example, some music festivals in England provide British Sign Language (BSL) interpreting on request. Still, the situation can face obstacles, and sign language interpretation is not widely advertised and can be of inadequate standard, says Marie Pascall, director of Performance Interpreting, which provides BSL interpreters to music and entertainment venues across the United Kingdom. Troi Lee has taken matters into his own hands. In 2003 he founded Deaf Rave, a quarterly event in London designed specifically for clubbers who are deaf and hard of hearing. The inspiration came from his experiences at illegal warehouse parties in the early 1990s, where the speakers amplified the vibrations he had once enjoyed through his Walkman. From that

"Disengage from live music," says journalist and filmmaker Charlie Swinbourne, who is deaf.

Small steps are being made toward inclusivity: for example, some music festivals in England provide British Sign Language (BSL) interpreting on request. Still, the situation can face obstacles, and sign language interpretation is not widely advertised and can be of inadequate standard, says Marie Pascall, director of Performance Interpreting, which provides BSL interpreters to music and entertainment venues across the United Kingdom. Troi Lee has taken matters into his own hands. In 2003 he founded Deaf Rave, a quarterly event in London designed specifically for clubbers who are deaf and hard of hearing. The inspiration came from his experiences at illegal warehouse parties in the early 1990s, where the speakers amplified the vibrations, he had once enjoyed through his Walkman. From that moment in 1991, he set out to convince the deaf community that clubbing was as much a part of their culture as the hearing world's. Through heightened bass levels and the use of new technology such as SubPac – a wearable speaker that intensifies vibrations – Lee can make his events immersive.

Lee says there is still much to be done. People who are deaf are twice as likely to suffer from depression as hearing people. "We are one of the most marginalized groups in society, owing to our isolation, unemployment, lack of BSL in mainstream schools, and the daily frustrations of communication barriers. We organized Deaf Rave because we have empathy for our community," says Lee.

Read the last paragraph. What is the most likely reason the author chooses to conclude the text with this paragraph?

- To show that the lack of inclusivity has negative material and emotional effects on people who are deaf.
- To illustrate the greatest barriers to deaf inclusion in live music events.
- To illustrate the deaf community's response to Lee's Deaf Rave events.
- To show that Troi Lee is dedicated to expanding the accessibility of live music events to deaf audiences.

Untitled text 9

In recent years Cruise vacations have become popular among travelers all over the world. Probably because they are more accessible now, or because every day there are more itinerary options. So, why is a Cruise a great vacation option? Think about the possibility of visiting the wonders of the world, or the most important milestones that every seasoned traveler dreams about visiting. You can literally travel the world. There are cruise choices that will enable you to visit every vacation spot featured in famous travel magazines. Three of the most popular cruise itineraries are the Mediterranean, the Caribbean, and the North of Europe.

Take a cruise to the Mediterranean and it'll take you to Civitavecchia, the port to visit the Vatican City, The Sixteenth Chapel, St. Peter's Cathedral and of course the famous Roman Colosseum. But this is just one port! The stop in Livorno, gives you the choices the cultural Florence, a bus ride to Pisa to see the famous leaning tower. Also in Italy, to the south you'll have a chance to take a Ferry to Capri Island, go on an excursion to the Vesuvius Volcano, or visit the ancient city of Pompeii.

The Caribbean is a whole different experience, featuring paradise beaches and sunny days for endless fun with friends and family. Whether you choose to go east or west, a fun time is guaranteed. To the eastern Caribbean you could visit Bahamas, Bermuda and its famous Triangle and do shopping in San Juan, Puerto Rico. The western Caribbean is famous Dunn River Falls in Jamaica, Chichen - Itza in Cozumel, Mexico, and last but not least, The Cayman Islands and its beautiful gemstones.

Not in the mood for summer vacations? Well, the North of Europe is the option, then. You could visit the emblematic and beautiful palaces and cathedrals of St. Petersburg. Up in the map the Little Mermaid waits for you in Denmark is a must see, as well as the famous Norwegian Fjords. Another choice is visiting North Cape, the northernmost point in Europe. If you are lucky enough, you could get to see one of the most astonishing nature wonders: The Northern Lights.

If you never thought you could get to have a dog-eared passport, it's time to change your mind, because on board a cruise you could easily get that and more. Choose your destination and book your cruise now!

Pregunta 28 de 70 ➤

SOCIAL CONTRACT

The term "social contract" refers to the idea that the government exists only to serve the will of the people. A country's people are the source of all political power. They can choose to give this power to the government or hold it back. The social contract is one of the foundations of the American political system. Popular sovereignty is the idea that a government's power comes from the people. This idea stems from the belief that a government should work for the benefit of its citizens. If the government is not protecting the people, it should be dissolved. The theory evolved from the writings of various philosophers.

Philosophers Jean-Jacques Rousseau and John Locke each took the social contract theory one step further. In 1762, Rousseau wrote a book called "The Social Contract, Or Principles Of Political Right." He explained that the government is built on the idea of popular sovereignty. The will of the people as a whole gives power to the government. In his book, Rousseau writes that "man is born free, but everywhere he is in chains." These chains come about through power and control. Rousseau writes that people must give authority to the government through a "social contract." He calls the people who have joined together the "sovereign." The sovereign makes the laws, and the government enforces them. In the end, the people are always looking out for the common good as opposed to the selfish needs of each individual.

John Locke also based his writings on the idea of the social contract. He wrote that in the "state of nature," people are essentially free. However, they might decide to form a government for their protection. A government allows them to punish individuals who go against the laws of nature and harm others. Locke wrote that the power of a king or government comes from the people. They make a "social contract," giving away rights to the ruler in exchange for security and laws. In addition, people have natural rights such as the right to hold property. The government cannot take these rights away without their consent. If a king or ruler breaks the contract, the people have the right to fight back. If necessary, they may remove the ruler from power.

The idea of the social contract had a huge influence on America's Founding Fathers. The U.S. Constitution itself starts with the three words "We the people," placing the idea of popular sovereignty at the very beginning of this key document. From this principle, it follows that a government established by the free choice of its people is required to serve the people. In the end, the people have the power to keep or get rid of that government. In fact, popular sovereignty is one of the six foundational principles upon which the U.S. Constitution is built.

Throughout American history, many different groups have used the social contract to support their positions. During the Revolutionary War, Americans favored the social contract theory over the British style of government. They looked to the social contract as support for their revolution. During the Civil War, social contract

John Locke also based his writings on the idea of the social contract. He wrote that in the "state of nature," people are essentially free. However, a government is formed for their protection. A government allows them to punish individuals who go against the laws of nature and harm others. The power of a king or government comes from the people. From this principle, it follows that a government established by the free choice of its people is required to serve the people. In the end, the people have the power to keep or get rid of that government. In fact, popular sovereignty is one of the six foundational principles upon which the U.S. Constitution is built.

Throughout American history, many different groups have used the social contract to support their positions. During the Revolutionary War, Americans favored the social contract theory over the British style of government. They looked to the social contract as support for their revolution. During the Civil War, social contract theory was used by both sides. Enslavers used it to support states' rights and succession from the Union. Abolitionists found support for their ideas in Locke's theories of natural rights.

Historians have also linked social contract theories to important social movements. For example, the idea of the social contract has influenced the movement for Native American rights. It has also influenced the fights for civil rights and women's rights.

Read paragraphs 2 and 3. Which sentence from these paragraphs supports the conclusion that making a government makes life better for the people?

- They make a "social contract," giving away rights to the ruler in exchange for security and laws.
- Rousseau writes that people must give authority to the government through a "social contract."
- In the end, the people are always looking out for the common good as opposed to the selfish needs of each individual.
- In his book, Rousseau writes that "man is born free, but everywhere he is in chains."

LETTER

Dear Mr. Johnson,

I have been asked to write to you concerning your doubts about my current employment. As I believe you are aware of the tough reality, we are dealing with these days in my country. Thus, I have a summer job at the Tiptop department store; however, I was hired for a definite period and that is something worrying for me and my relatives as well.

Although I am willing to get a greater job, I am giving my best and trying to pull myself together since it has been hard. To satisfy your queries about my functions, I work on the fifth floor in the women's clothing department. The store is always full of customers, and it does not matter the time, the weather, or circumstance I do always have to smile and say, "Can I help you?", but inside I want to say, "Go home!" since I usually must be on my feet all day and only have an hour as a break to have lunch. I need a vacation!

Aside from these aspects, I am boosting my social skills and I am convinced this is one of my most important strengths nowadays. I very much hope you will consider the information provided and look forward to receiving your response.

Yours sincerely,

Sue Brown

What does "Go home" imply?

- She is asked to say goodbye to customers.
- She is willing a call it a day.
- She fancies getting a pay raise.
- She is into socializing more.

The Voice

Kimiko: Hey, Mia! Long time no see. Come sit next to me on my cozy couch. How are you?

Mia: Hi Kimiko. I'm so glad exams are finally over. I've been literally a prisoner in the library. I haven't even been able to watch my favorite program on TV. I am glad I'll be able to catch up with it this weekend.

Kimiko: Oh well, I'm not much of a TV fan, but I have recently hooked on The Voice. This edition is really gripping. You know? That program in which amateurs of all ages try their luck by singing in front of some celebrities, who make the decision of letting them continue in the reality. But why am I telling you? You are the TV expert!

Mia: All right, I wouldn't call myself an expert, but I guess I could easily work as a critic, or in some gossip TV show. Do you know that the first program ever was in 2010? And did you know that contrary to what people think it is not an American, but Dutch?

Kimiko: Really! Oh, I would never have guessed! I'm astonished! And the coaches were four since the beginning?

Mia: Yes! The Voice of Holland was the first edition ever, and it was there where the famous celebrities, the mentor-judges were dubbed "coaches". Which were their names... Let me think...

Kimiko: Wait, take it easy. I don't think that is much relevant now. Better tell me who was the inventor of the format. I bet you know!

Mia: Of course, I do! It was the famous multi-millionaire John De Mol Jr., the same mastermind behind The Big Brother, and other successful formats of Endemol and Talpa. He really broke patterns by coming up with the idea of the blind auditions as the important thing was focusing on the voice of contestants, and not the appearance.

Kimiko: Oh, I see ... That's why the chairs rotate. And tell me, was that concept also his idea?

Mia: Nope. That was the famous Van Velzen's contribution. You know him, right?

Kimiko: Er, ... I'm afraid we'll have to continue with this chat later. Look, The Voice is about to start!

According to the dialogue, what can be inferred about De Mol?

- He comes from a family of artists.
- He invested little money in the format.
- He is a successful showbiz entrepreneur.

Kimiko: Oh, I see ... That's why the chairs rotate. And tell me, was that concept also his idea?

Mia: Nope. That was the famous Van Velzen's contribution. You know him, right?

Kimiko: Er, ... I'm afraid we'll have to continue with this chat later. Look, The Voice is about to start!

According to the dialogue, what can be inferred about De Mol?

- He comes from a family of artists.
- He invested little money in the format.
- He is a successful showbiz entrepreneur.
- There is a chance for him to become a coach.

• Estado de finalización de la pregunta:

BUBBLER

The new innovative puzzle "Bubbler" was developed by Josh Rice. In 2022 the Mississippi Times purchases it for a seven-figure sum hoping it would boost subscriptions to their on-line newspaper. It worked; this game has climbed to nothing short of meteorically this year.

However, there are some critics that have stated that it is not a new idea, which has caused some controversy. Others have complained about how daily reports of individual expertise are dominating online conversations causing the debarring of everything else. Bubbler has clearly caused a disturbance many people, and here are several reasons why.

What is unusual about people around the world all competing against the same daily puzzle? Sharing results on social media is so easy that it is what first led to the quickly expanding growth in the number of players, and whether people are sharing, or bragging is perhaps an irrelevant point. These days, we are all looking to connect with other people, and Bubbler delivers. People working from home have the perfect excuse to unleash themselves from the keyboard, and although players are caught in the grips of this puzzle, they do not waste too much of their time since there is only one released each day.

It is common to hear people stating that cryptic word games have made them more intelligent in some way. Is this statement a scheme? If we look into the results of research done on champion Marble players, the answer seems to be yes, nor does it slow the brain's aging process, as many believe.

All the significant conversations about how to solve Bubbler say it may improve our tactical planning abilities. Tips on how to succeed at Bubbler can be found everywhere online and people are soaking them up. Letter frequency is one of the sets of conversations people revolve around. Evidently, the more often a letter appears in English words, the higher the chance of success when inserting it as a guess. Therefore, Y is a poor choice, but P is not. However, frequent letter combinations in English must also be looked at; we often see SH together. Taking this a step further, we need to recognize that while SH can begin or end a word, other common combinations like NG usually occur at the end.

On the other hand, some conversations inspire different guessing strategies. Spoiler alert: making two unrelated guesses for the first and second attempts, and then integrating this information to apprise the third guess seems to be a preferred approach amongst people. There are also numerous suggestions for the best words to start with, some players even feel superstitious about their lucky words bringing them success.

Bubbler may be just a game, but perhaps it might be making the world not only a bit smarter but also definitely a bit more friendly.

What's not accurate about paragraph 4?

- Studies have shown that word games boost people's intelligence.
- Word games are not really effective in reducing brain ageing.
- Marble is a game like Bubbler.
- It's a common belief that word games help people be smarter.

UNTITLED Text 4

Toiletries are part of our hygiene routine and help us to look great and have a pleasing fragrance. Makeup has become well-known not only among women or young girls, but nowadays, some men use it to have a good appearance, and there is a big industry behind it. Products of skincare and medicine are in high demand from different people. All of them are popular, utilized by different public types, and have direct contact with our skin and body.

We all agree that they must be safe products that guarantee good results. Therefore, it is necessary to test them before humans have direct contact with them, and it is necessary to identify their toxicity levels to prevent any allergic reactions and even death. Companies and laboratories consider they need to test them to reduce the liability risks of their products, to avoid any legal claims and to guarantee the efficacy of their medicine, especially creams.

Now, we could analyze this ethical question: Where should the products be tested? Probably, the first answer is on animals, but why on animals if they have rights and should be protected by the Animal Welfare Act?

It is necessary to be conscious of animal testing since it is unethical and an archaic procedure. Animal testing is a cruel practice that should be banned entirely because it does not respect animal rights.

This practice infringes the rights of animals because throughout the process, they are burned, poisoned, shocked, and after the experimentation, they are killed cruelly with methods such as decapitation, neck twisting and asphyxiation.

Animals are supposed to be protected by the Animal Welfare Act, but many are excepted for minimal protection. According to Ferdowsian & Beck, "The U.S. Animal Welfare Act excludes purpose-bred birds, rats, or mice, which comprise more than 90% of animals used in research" (2011, p. 2). It is entirely unfair to continue with those actions because they hurt innocent creatures that have language-like and problem-solving skills, cognition, and self-awareness. Additionally, animal testing is an amoral practice because about 50 to 100 million species are part of experiments annually, and according to Kate Taylor, a member of the British Union for the Abolition of Vivisection, in her recent study: "Estimates for worldwide laboratory animal use," millions of animals are part of that practice each year worldwide, but laboratories do not include the exact number.

The UK'S Research Defense Society admitted that the global total maybe 50 million. Still, the estimates are inaccurate because some procedures and forms of animals are excluded, and that is because there exists a big contradiction: governments sanction animal testing, but many of their agencies request those kinds of tests. There is enough evidence that this practice violates animal rights, hurting them in cruel and dishonest experiments.

With respect to the correlation in principles between companies and consumers, most consumers demand cruelty-free products. Nowadays, more companies see it necessary to include in their labels the information "not tested-on animals," and that's because, according to Grappe et al. (2021), consumers will have a positive perception of the company. They are more accepted in society since the purchasers start to consider the firms as "socially responsible" and that kind of information in products enhances their ethical image.

All the laboratories and corporations need to bear in mind that consumers have internal values for animal well-being, and those principles influence their consumption attitude toward products that satisfy what they consider correct. Therefore, marketing experts in different corporations must contemplate a positive correlation

perception of the company. They are more accepted in society since the purchasers start to consider the firms as "socially responsible" and that kind of information in products enhances their ethical image.

All the laboratories and corporations need to bear in mind that consumers have internal values for animal well-being, and those principles influence their consumption attitude toward products that satisfy what they consider correct. Therefore, marketing experts in different corporations must contemplate a positive correlation between attitudes and purchase intention of cruelty-free brands.

It's clear that now corporations must deal with consumers that not only buy because they need to satisfy a necessity, but they also buy considering their own values, and if they have another product that covers the same necessity and offers what they want, they are going to choose it. As a result, animal testing is a practice that must stop since the demand for cruelty-free products has increased and companies depend on the preferences of customers.

What can be said about animal rights?

- Not all animals have equal rights.
- Animal rights are not protected by law.
- Animals do not have rights.
- All animals are protected by animal welfare.

THE ADVANTAGES AND DISADVANTAGES OF BUYING THE LATEST TECHNOLOGY

It cannot be denied that advances in technology have contributed to improving our lives and have made everyone's life much simpler. Technology has been immersed in all areas of our life, for example, study, job, home, communications, entertainment, and other aspects. Furthermore, it is a paradox that although technology helps us a lot, few people do not appreciate it. In this essay, I will explain the advantages and disadvantages of technology.

One advantage is that you will be at the forefront on different social topics to make a favorable difference. No one would contest the fact that the latest technology helps you stand out at work and communication, entertainment, health, and the environment have benefited from it as well. So regrettably, and much to my parent's vexation, having these technological devices turned on all day is a must.

On the other hand, there are also problems with the stores as these products become scarce rapidly. One disadvantage is that you may face risky situations since cybercriminals can steal your personal information and money from your bank accounts. Another drawback of using the latest technology is that it is highly expensive; therefore, even though people need this technology, only a few can purchase them. Lastly, if these state-of-the-art devices break down you either will have to get someone to fix it or simply buy a new one.

To sum up, the advantages of buying the latest technology far outweigh any disadvantages owing to its plentiful reasons. Having mentioned various features related to this recent topic, it is well known that lots of people are in favor of using this new scientific knowledge in their daily lives as well as some are against doing so. However, the last decision of using it or not will be just yours.

Based on this essay, it is agreed that...

- the higher the technology, the fewer faulty devices you can find.
- more and more people are eventually averse to the use of technology.
- the downsides of technology prevail over its benefits.
- there is a wide range of uses that technology can offer.

SOCIAL CONTRACT

The term "social contract" refers to the idea that the government exists only to serve the will of the people. A country's people are the source of all political power. Sovereignty is the idea that a government's power comes from the people. This idea stems from the belief that a government should work for the benefit of its citizens. If the government is not protecting the people, it should be dissolved. The theory evolved from the writings of various philosophers.

Philosophers Jean-Jacques Rousseau and John Locke each took the social contract theory one step further. In 1762, Rousseau wrote a book called "The Social Contract, Or Principles Of Political Right." He explained that the government is built on the idea of popular sovereignty. The will of the people as a whole gives power to the government. In his book, Rousseau writes that "man is born free, but everywhere he is in chains." These chains come about through power and control. Rousseau writes that people must give authority to the government through a "social contract." He calls the people who have joined together the "sovereign." The sovereign makes the laws, and the government enforces them. In the end, the people are always looking out for the common good as opposed to the selfish needs of each individual.

John Locke also based his writings on the idea of the social contract. He wrote that in the "state of nature," people are essentially free. However, they might decide to form a government for their protection. A government allows them to punish individuals who go against the laws of nature and harm others. Locke wrote that the power of a king or government comes from the people. They make a "social contract," giving away rights to the ruler in exchange for security and laws. In addition, people have natural rights such as the right to hold property. The government cannot take these rights away without their consent. If a king or ruler breaks the contract, the people have the right to fight back. If necessary, they may remove the ruler from power.

The idea of the social contract had a huge influence on America's Founding Fathers. The U.S. Constitution itself starts with the three words "We the people," placing the idea of popular sovereignty at the very beginning of this key document. From this principle, it follows that a government established by the free choice of its people is required to serve the people. In the end, the people have the power to keep or get rid of that government. In fact, popular sovereignty is one of the six foundational principles upon which the U.S. Constitution is built.

Throughout American history, many different groups have used the social contract to support their positions. During the Revolutionary War, Americans favored the social contract theory over the British style of government. They looked to the social contract as support for their revolution. During the Civil War, social contract theory was used by both sides. Enslavers used it to support states' rights and succession from the Union. Abolitionists found support for their ideas in Locke's theories of natural rights.

Historians have also linked social contract theories to important social movements. For example, the idea of the social contract has influenced the movement for Native American rights. It has also influenced the fights for civil rights and women's rights.

What effect did Jean-Jacques Rousseau have on how government is understood?

- Rousseau suggested that all governments get their power from the people.
- Rousseau demonstrated that governments only exist to punish people who hurt the community.
- Rousseau explained that people have the right to overthrow their government at any time.
- Rousseau argued that governments should be led by the strongest people in a community.

As most of you know, getting a job these days has been tough and for some people was like a nightmare. Fortunately, I got a new job! It was not rocket science I must acknowledge that I was completely afraid of applying and that was the main reason why I hadn't got one much earlier. In this opportunity, I would like to tell you about my new job and how wonderful this experience has been!

Well, first I must take the train to go to work, which is more comfortable than going by bus. One of the greatest things about this job is that I am able to get there at 9 o'clock, an hour later than my last one. I have begun to get up calmly and enjoy breakfast so far.

Another wonderful thing about this is the building, which is considered the most amazing and biggest one in the city. Unbelievably, it has its heliport on the rooftop which has recently been built. Don't you think that is astonishing?

This company has applied proper technology in all of its processes. The laptop they assigned me is better and faster than my last one. Also, the ERP is more modern than the one in my last job. The most useful aspect of this ERP is the connection with a platform called Lumira, where you can develop incredible reports online.

One thing that I enjoy about this new company is that we can have small meetings with any department because we can use a communication tool called "Teams". I believe that those small meetings are more efficient than large ones.

This company has expanded so fast in the last three years, mainly because they have paid a lot of special attention to customer service and customer experience, something that did not happen in my former workplace.

Finally, this job is better paid than my last dead-end job, and thus encompasses better social benefits. The point is to do a bang-up job. I wish my friend Danna were here. I am sure she would be able to get through the glass ceiling since it is a dog-eat-dog environment. A hatchet man would have no space here. I think that the only thing that I am not comfortable with is the distance from my house, this job location is further than my last one. A two-hour commute is killing me. Also, I will miss my friend from my last job, but we are going to be in touch. As we used to say, a friend in need is a friend indeed.

I am extremely excited about this new opportunity, and I will do my best to achieve the new challenges.

According to the text, what is special about the building?

- It has a room exclusively for brick-and-mortar meetings.
- It has a place where a means of transport takes off and lands.
- It has a special environment for dogs.
- It is superannuated

Pregunta 37**PSYCHOLOGY STUDY**

1 puntos Guardar respuesta

Recent studies in the field of developmental psychology have shown that the use of different media technologies has a great impact on our cognitive skills. For instance, playing video games can increase the speed at which people can change their focus among different images on a screen. On the other hand, other studies demonstrated that changing our focus so fast results in what scientists call "automatic thinking".

An experiment carried out in a German university allowed one part of the students to use their laptops and surf the web while listening to a lecture, the other part of the students did not use their laptops at all. Results showed that those who surfed the web performed poorly on a test they did to examine how much information of the lecture they remembered. In addition, previous experiments uncovered that the more types of information students are exposed to, the less they will remember what they see.

Some experts have concluded that our increasing use of technologies has weakened our higher-order cognitive processes, such as critical thinking, creativity, mindfulness, abstract vocabulary, reflection, and imagination. In other words, our cognition is becoming dull.

Other researchers confirm this affirmation. It has been found that people who browse the web spend less than ten seconds on each website they visit. Even students or professionals doing academic work who research online are prone to rapidly shift from one document to another without even reading more than two pages. These mental shifts are taking a big toll on us.

We must know, though, that not all distractors are harmful. If we focus too intensively on a difficult problem, we might get stuck in a mental rut. Nevertheless, if we take a break for some time, we often return to the task with a fresher perspective and more creativity. It has been proved that such breaks help us make better decisions. Therefore, we need to shift our attention away from mental challenges from time to time.

However, the ceaseless distractedness that the Internet encourages is very different from the kind of temporary, crucial breaks our minds need to refresh our thinking. What we are putting at stake through the continuous use of the Net is our capacity to engage in these quiet and reflective moments that uphold our attentive modes of contemplation and introspection.

In the fifth paragraph, the author is trying to convey that...

- our minds work in ways that computers cannot control.
- permanent concentration on something is not always a positive thing

HOW IT ALL STARTED

1 puntos

Guardar respuesta

Good morning, everyone! I hope all of you had a great weekend and had a blast with your family.

Well, let's get down to business. I am writing to share with you my experience with the American team of Crate & Barrel in our country and the unique store that has been established in Lima by our firm. As you remember, around 2015, we were contacted by a partner company to be part of a bidding contest for the first Crate & Barrel store in Peru.

It was unforeseen for us since we represent an architectural studio with several years of experience in design and manufacturing on retail stores, we had already had the opportunity of working in 70 to 150m² stores such as the Mango brand, but we have never overseen a building site of 2500m² complex. Undoubtedly, it was such an enriching challenge for our team. Having participated in this project is a remarkable episode that we will never forget it. It is thus that we have been rated as one of the most important companies in the country since then.

The author intends to...

- divulge their recent projects.
- advertise their organization.
- state the studio's business plan.
- portray a momentous passage in their lives.

TWO THOUSAND YEARS AGO

Two thousand years ago, the Romans burned the ancient city of Carthage, Tunisia, to the ground. Today, Carthage is once again facing destruction. This time, though, the threat comes from the sea. Across North Africa, climate change is causing major problems. Lives are being transformed, and ancient sites of great historical value are in danger. North Africa is now on the front lines of climate change. Yet, the region's residents are receiving little support, resources, or attention from the rest of the world. In Tunisia, the fishermen of Ghar el-Melh are where you can always find them these days. They are not on their boats, but at the cafe down by the docks. Ghar el-Melh is located 30 miles north of Tunis, the capital of Tunisia. It was once a bustling fishing hub, famous for its plentiful deep-water delicacies and freshwater species from the town's lagoon.

Nonetheless, in recent years, climate change has brought warmer temperatures, higher winds, and surging storms. As a result, the number of "fishing days" per year has dropped from six months to just 60 days. Many once-common kinds of fish are no longer found at all. However, these changes are affecting more than just the sea. Coastal communities are under threat as well. In addition to rising temperatures and more frequent storms, climate change has also been causing rising sea levels. Therefore, the land barrier separating the ocean and the lagoon is rapidly shrinking. Only a couple of yards of land separate the sea from the 10-square-mile lagoon and its ecosystem of freshwater eels and fish. A single storm could submerge the whole town. Indeed, a major storm or flooding could submerge the lowlands all the way to Ariana, in the northwest suburbs of Tunis.

Countless farms and properties would be destroyed along the way. With record-shattering high temperatures and decreasing rainfall, Morocco has endured a series of record droughts over the past five years. This has devastated crops and the national economy. More than 40 percent of Moroccans rely on farming. Farmer Azziz Hassine says drops in rainfall over the past two years have resulted in a 70 percent decrease in production on his small farm outside Casablanca. This has made it impossible for him to earn a profit.

The effects of a rapidly shifting climate are even more visible at Carthage's Antoninus Baths. These elaborate baths were built by the Romans along the seaside. Increased evaporation of seawater due to rising summer temperatures has led to high winds picking up salt, pebbles, and sand. This gritty material is slamming into the Baths' statues, columns, and monuments, eroding them away and pockmarking them with holes. Not only Carthage is at risk. Hundreds of other important archaeological sites along North African coastlines are also in danger. Tunisia and other North African countries are doing what they can to respond to the threat of climate change. However, these nations are not wealthy, and they are limited in what they can do on their own.

Nonetheless, in recent years, climate change has brought warmer temperatures, higher winds, and surging storms. As a result, the number of "fishing days" per year sea. Coastal communities are under threat as well. In addition to rising temperatures and more frequent storms, climate change has also been causing rising sea levels. Tunisia and other North African countries are doing what they can to respond to the threat of climate change. However, these nations are not wealthy, and they are limited in what they can do on their own.

What effect has climate change had on Carthage's Antoninus Baths?

- It has caused the seaside baths to lose most of the visitors who once went there.
- It has caused the seaside baths to lose most of their water to evaporation.
- It has caused large parts of the seaside baths to collapse into the rising seas.
- It has caused the seaside baths to be worn away by sand and salt driven by wind.

SMART GRID DRAWBACKS

With changes towards smart energy such as Smart Grid Technology comes a range of challenges. The first step entails balancing supply and demand. Renewable energy sources such as wind, wave, and solar are notoriously unreliable, while nuclear power, which is expected to grow as countries transition to alternative energy sources, is unyielding. With regards to oil and gas, increasing the energy supplies to meet rising demand during peak times of the day or year is quite easy. This is significantly more challenging with alternate sources and may result in outages or system failures. Investigating innovative and more effective ways to store energy, as well as encouraging people to utilize electricity during off-peak hours, are two possible answers.

Another issue is that many renewable energy sources are in isolated areas, such as: windswept uplands and coastal regions where electrical infrastructure is currently lacking. As a result, new infrastructure must be constructed. Thankfully, due to advances in smart technology, this may be done more efficiently by lowering the cost of reinforcing buildings or building new ones.

Even though Smart Technology is still in its infancy, pilot programs to promote and test it are already in the works. Consumers are presently testing new smart meters that can be used to manage electricity use in their homes. There will also be several demonstrations to highlight how smart technology may be used in practice, as well as trials to test the new electrical infrastructure. Technology will most likely be introduced in 'layers,' with 'fast win' ways providing immediate carbon reductions, followed by more advanced systems in the future. Due to their high population density and high energy demand, cities are ideal candidates for smart energy investment.

Smart Technology, which makes use of a variety of sustainable power sources, transportation solutions, and infrastructure for charging electric vehicles, is likely to be promoted first. Infrastructure is already changing at a rapid pace. Changes in energy supply will have affected our homes, roadways, and behavior by the year 2050.

What is mentioned about the supply and demand of alternative energy sources?

- Nuclear power is the best of them all.
- Wind, wave and solar energy sources cannot compare to nuclear energy.
- It will be difficult to answer to the fluctuating increases in future demand.
- Oil and gas can prove to be just as unreliable.
