Question 1

Kenya

Kenya is one of the forty-eight countries in Africa. It has endured drought, scarcity of food, and lots of disputes, but today after years and years of steady development, it is being regarded as a model for the future of the African continent. Rather than conventional sightseeing in Kenya, I will delve into the dynamics of a flourishing and prospering country of more than a hundred million. I will learn how water, new techniques for agriculture, good nourishment, education, and empowering girls and women are pivotal to the development of this region. I will check in on new technology that amps up growth and see how Kenya is becoming part of the global economy, and I will do it in a way to better understand how development is working around the world.

Around a three-hour flight south of Madrid, Kenya, approximately the size of Spain, is the main country in the Horn of Africa territory. Time to start in the capital Nairobi, fly to Nairobi to explore the Athi River area, and then go to Samburu of Kenya to check out life in the Northern territories. Kenya is honored to be a country that was never a European dependency. Along with hectic cities, Nairobi also has a rich and ancient heritage. Kenya is a country of many ethnic groups and intense differences. It has some of the oldest Christian temples and chapels anywhere in Africa, a world-renowned tea tradition, and breathtaking natural beauty.

While Kenya has long been pegging away with indigence and famine, it is making roaring strides. And nowadays, countries like Kenya are an inspiring expectation in the developing world with stable profits. Kenya's capital, Nairobi, is a city of over four and a half million people. It has a lot of energy: high-rises, effective mass transit, and the main offices of the African region. However, Nairobi also has its topsy-turvy market scenes, little shanties, and teeming slums. Big cities like Nairobi are an appealing draw to young people from rural areas. For poor countryside people, such a high-energy urban area with an enticing consumer community and office towers that seem to guarantee job opportunities has strong charm.

Which sentence or phrase has to do with searching to find information?

- ...dive into the dynamics of a thriving and growing country.
- ...a world-renowned coffee tradition
- ...technology that amps up development.
- ...countries like Kenya are inspiring hope in the developing world.
- ...empowering women are fundamental to development.

Question 4

Tool 2

With thousands of options, how will you choose a career that's right for you? Would opting for the law field, since it has been a family tradition over generations be a valid option? If you don't have any idea what you want to do, the task may seem insurmountable. Fortunately it isn't! Follow an organized process and you will increase your chances of making a good decision.

Before you can choose the right career, you must learn about yourself. Your values, interests, soft skills, and aptitudes, in combination with your personality type, make some occupations a good fit for you and others completely inappropriate. Use self-assessment tools and tests to gather information about yourself, and subsequently, generate a list of occupations that are a good fit. Some people choose to work with a career counselor.

If your reasons for finding a career unacceptable are non-negotiable, cross it off your list. Remove everything with duties that don't appeal to you. Eliminate careers that have www.job outlooks. Get rid of any occupation if you are unable or unwilling to fulfill the educational or other requirements, or if you lack some of the soft skills necessary to succeed in it.

When you have only a few occupations left on your list, start doing more in-depth research. Arrange to meet with people who work in the occupations in which you are interested. They can provide firsthand knowledge about the careers on your shortlist. Access your network, including LinkedIn, to find people with whom to have these informational interviews.

Finally, after doing all your research, you are probably ready to make your choice. Pick the occupation that you think will bring you the most satisfaction based on all the information you have gathered. Realize that you are allowed to re-evaluate your choice at any point in your life. Many people change their career paths at least a few times.

What is the focus of the second paragraph?

- Assessing oneself
- Pointing out the importance of being organized
- Exploring among different choices
- How not to go for the wrong option

Question 5

A Truckers Tale.

If it was an unusually warm January morning as we prepared for our upcoming trip. Our trucks were checked and ready to go. The huge Detroit diesel engines started with a powerful roar, rumbling with anticipation to pull their heavy loads. There would be four trucks travelling together on the 700km crossing from Prince Edward Island to Grand Falls, New Brunswick. It was not a long trip, but at this time of year the roads and weather were equally unpredictable, and of course, there was the Meductic hill. The Meductic hill is a 3km, steep, twisting, downhill grade that is considered dangerous in any season, let alone the winter. Many trucks and drivers had come to an untimely demise due to this hill; you had to be prepared for anything.

As we climbed aboard our trucks a light snowfall began creating a light dusting on the road. Our big tires bit into the light snow as we moved out. Once we crossed the bridge to the mainland the snow started to fall heavier but still not a real concern. We had all driven through blizzard conditions in the past, so this was really nothing.

The first three hours were uneventful, it had been a relaxing drive up until this point, but the Meductic hill was looming ahead. We all did our last checks in preparation for the long descent. Suddenly, I heard a loud bang. I immediately thought I had blown a tire, but everything seemed to be ok. I touched the brakes to slow the truck and that was when I realized what the noise was. I had burst my main air brake line. I was now traveling at 90km per hour with no brakes and quickly approaching a killer hill. I radioed the other drivers to explain the situation. We had to come up with a plan to stop my truck and we had to do it fast. We decided that the only option was to position the other three trucks around me. One in front, dangerous plan but better than the certain outcome if I started the descent without brakes. Our trucks bumped and metal ground as we attempted to slow me. The plan was working, and I finally came to a stop.

Our trucks took some damage, and my nerves were rattled, but everyone was ok. We repaired the damaged brake line, we all breathed a sigh of relief, and as drivers do, we continued on. At that moment everything was good, but who knows what lies ahead on this treacherous road.

What is the brand name of the truck engines?

Volvo.

Detroit.

Caterpillar.

Freightliner.

Question 13

A Truckers Tale.

If it was an unusually warm January morning as we prepared for our upcoming trip. Our trucks were checked and ready to go. The huge Detroit diesel engines started with a powerful roar, rumbling with anticipation to pull their heavy loads. There would be four trucks travelling together on the 700km crossing from Prince Edward Island to Grand Falls, New Brunswick. It was not a long trip, but at this time of year the roads and weather were equally unpredictable, and of course, there was the Meductic hill. The Meductic hill is a 3km, steep, twisting, downhill grade that is considered dangerous in any season, let alone the winter. Many trucks and drivers had come to an untimely demise due to this hill; you had to be prepared for anything.

As we climbed aboard our trucks a light snowfall began creating a light dusting on the road. Our big tires bit into the light snow as we moved out. Once we crossed the bridge to the mainland the snow started to fall heavier but still not a real concern. We had all driven through blizzard conditions in the past, so this was really nothing.

The first three hours were uneventful, it had been a relaxing drive up until this point, but the Meductic hill was looming ahead. We all did our last checks in preparation for the long descent. Suddenly, I heard a loud bang. I immediately thought I had blown a tire, but everything seemed to be ok. I touched the brakes to slow the truck and that was when I realized what the noise was. I had burst my main air brake line. I was now traveling at 90km per hour with no brakes and quickly approaching a killer hill. I radioed the other drivers to explain the situation. We had to come up with a plan to stop my truck and we had to do it fast. We decided that the only option was to position the other three trucks around me, allowing me to run into the back of him and he would try to slow me using his brakes. The other two would be on either side of me keeping my trailer from sliding left to right. It was a dangerous plan but better than the certain outcome if I started the descent without brakes. Our trucks bumped and metal ground as we attempted to slow me. The plan was working, and I finally came to a stop.

Our trucks took some damage, and my nerves were rattled, but everyone was ok. We repaired the damaged brake line, we all breathed a sigh of relief, and as drivers do, we continued on. At that moment everything was good, but who knows what lies ahead on this treacherous road.

The Meductic hill is a...

tiny hill.

steep decline.

steep incline.

flat and twisting road.

Question 16

A truckers Tale.

It was an unusually warm January morning as we prepared for our upcoming trip. Our trucks were checked and ready to go. The huge Detrola roared, rumbling with anticipation to pull their heavy loads. There would be four trucks travelling together on the 700km crossing from Prince Edward Brunswick. It was not a long trip, but at this time of year the roads and weather were equally unpredictable, and of course, there was the Meductic. This steep, twisting, downhill grade is considered dangerous in any season, let alone the winter. Many trucks and drivers had come to an unfortunate end here.

As we climbed aboard our trucks a light snowfall began creating a light dusting on the road. Our big tires bit into the light snow as we moved mainland the snow started to fall heavier but still not a real concern. We had all driven through blizzard conditions in the past, so this was nothing new.

The first three hours were uneventful. It had been a relaxing drive up until this point, but the Meductic hill was looming ahead. We all did our best to stay alert. Suddenly, I heard a loud bang. I immediately thought I had blown a tire, but everything seemed to be ok. I touched the brakes to slow down what the noise was. I had burst my main air brake line. I was now traveling at 90km per hour with no brakes and quickly approaching a killer turn. We had to come up with a plan to stop my truck and we had to do it fast. We decided that the only option was to position the other two trucks behind me to stop me. This was a dangerous plan but better than the certain outcome if I started the descent without brakes. Our trucks bumped and metal ground as we attempted to stop.

Our trucks took some damage, and my nerves were rattled, but everyone was ok. We repaired the damaged brake line, we all breathed a sigh of relief and continued on. At that moment everything was good, but who knows what lies ahead on this treacherous road.

To slow the truck, the other trucks were positioned...

one at the front and one on either side.
 two at the front and one at the back.
 one at the front, one at the side while the third raced for help.
 one at the front and two at the back.

Question 17

The Galápagos Islands

In the eastern Pacific Ocean, there is an archipelago of islands known as the Galápagos Islands. They are a part of South American nation Ecuador, located about 965 kilometers off the coast of Ecuador.

The Galápagos archipelago is composed of thirteen large islands and a few smaller ones. The largest of the islands is called Isabela. It is a unique island ecosystem due to its isolation and the lack of predators.

Most people recognize the Galápagos for their wide variety of plant and animal species. Many species are endemic, which means they are found nowhere else in the world. These include the flightless cormorant, the marine iguana, the enormous Galápagos tortoise, and the Galápagos penguin, which is the only penguin found in the Northern Hemisphere.

The Galápagos Islands have a distinctive island ecosystem due to environmental factors. Despite being close to the equator, the Galápagos Islands have a cool climate. As a result, there is an odd blending of tropical and temperate climates. The islands have been incredibly remote for the majority of their history, which has allowed many unique species to evolve.

For over 180 years, researchers have studied this intricate ecology. Charles Darwin, a British naturalist, is arguably the most significant scientist to have studied the Galápagos Islands. On board the HMS Beagle, Darwin made his first voyage to the Galápagos in 1835. His idea of evolution via natural selection was developed during this time.

These days, researchers also focus on the aquatic ecosystems of the archipelago. Salome Ursula Burglass, a marine ecologist, for instance, studies the marine life that exists on and near the deep-sea seamounts or underwater volcanoes of the Galápagos.

According to the text, the largest island Isabela...

is 129 miles long.
 has an abrupt mountainous geography.
 has a tropical feel.
 is attractive for all tourists.

Question 31

Text 2

With thousands of options, how will you choose a career that's right for you? Would opting for the law field, since it has been your dream since childhood, be a good choice? What if you don't have any idea what you want to do, the task may seem insurmountable. Fortunately, it isn't. Follow an organized approach to narrow down your choices.

Before you can choose the right career, you must learn about yourself. Your values, interests, soft skills, and aptitudes, i.e., what you're good at, will help you identify occupations that are a good fit for you and others completely inappropriate. Use self-assessment tools and tests to gather information about yourself and the world of work. Once you have a clear understanding of your strengths and interests, you can start exploring various career paths. Some people choose to work with a career counselor or a mentor who can provide guidance and support throughout the process.

If your reasons for finding a career unacceptable are non-negotiable, cross it off your list. Remove everything with duties that don't align with your values or weak job outlooks. Get rid of any occupation if you are unable or unwilling to fulfill the educational or other requirements, such as physical strength or a specific personality trait.

When you have only a few occupations left on your list, start doing more in-depth research. Arrange to meet with people who work in those fields to gain first-hand knowledge about the careers on your shortlist. Access your network, including LinkedIn, to find professionals in your target industries who can provide valuable insights.

Finally, after doing all your research, you are probably ready to make your choice. Pick the occupation that you think will lead to a fulfilling career. Remember that you are allowed do-overs if you change your mind about your choice at any point in your life.

Which cannot be inferred in paragraph 4?

You have gotten around to narrowing the list of choices.

The need to have a clear understanding of the process while straining options.

Talking to the right people can provide valuable insight.

 Resourcing your circle and personal learning environment is a valid option.

Question 29

A Truckers Tale.

It was an unusually warm January morning as we prepared for our upcoming trip. Our trucks were checked and ready to go. The road, rumbling with anticipation to pull their heavy loads. There would be four trucks travelling together on the 700km crossing from Brunswick. It was not a long trip, but at this time of year the roads and weather were equally unpredictable, and of course, there was a steep, twisting, downhill grade that is considered dangerous in any season, let alone the winter. Many trucks and drivers had to be prepared for anything.

As we climbed our trucks a light snowfall began creating a light dusting on the road. Our big tires bit into the light snow and mainland the snow started to fall heavier but still not a real concern. We had all driven through blizzard conditions in the past, so...

The first three hours were uneventful, it had been a relaxing drive up until this point, but the Meductic hill was looming ahead. I descended. Suddenly, I heard a loud bang. I immediately thought I had blown a tire, but everything seemed to be ok. I touched the wheel to see what the noise was. I had burst my main air brake line. I was now traveling at 90km per hour with no brakes and quickly approached the situation. We had to come up with a plan to stop my truck and we had to do it fast. We decided that the only option was to allow me to run into the back of him and he would try to slow me using his brakes. The other two would be on either side of me and I finally came to a stop.

Our trucks took some damage, and my nerves were rattled, but everyone was ok. We repaired the damaged brake line, we all continued on. At that moment everything was good, but who knows what lies ahead on this treacherous road.

The loud bang that the driver heard was a...

- deer on the road,
- blown tire,
- burst air brake line.
- burst hydraulic brake line.

Question 32

The Galápagos Islands

In the eastern Pacific Ocean, there is an archipelago of islands known as the Galápagos Islands. They are a part of South America located about 900 kilometers off the coast of Ecuador.

The Galápagos archipelago is composed of thirteen large islands and a few smaller ones. The largest of the islands is called Isabela.

Most people recognize the Galápagos for their wide variety of plant and animal species. Many species are endemic, which means they are found nowhere else. These include the flightless cormorant, the marine iguana, the enormous Galápagos tortoise, and the Galápagos penguin, which is the only penguin found in the Northern Hemisphere.

The Galápagos Islands have a distinctive island ecosystem due to environmental factors. Despite being close to the equator, the Galápagos Islands have a range of climates from tropical to temperate. The islands have been incredibly remote for the majority of their history, which has led to unique adaptations in many of the species that live there.

For over 180 years, researchers have studied this intricate ecology. Charles Darwin, a British naturalist, is arguably the most significant figure in the study of the Galápagos Islands. On board the HMS Beagle, Darwin made his first voyage to the Galápagos in 1835. His idea of evolution via natural selection was developed during this time.

These days, researchers also focus on the aquatic ecosystems of the archipelago. Salome Ursula Burglass, a marine ecologist, for example, studies the deep-sea seamounts and underwater volcanoes of the Galápagos.

How many islands make up the archipelago of Galápagos?

- Thirteen large islands and a few smaller ones.
- Thirty large islands and two smaller ones.
- Thirteen large islands and two smaller ones.
- Thirteen large islands and a few smaller ones.

 Moving to the next question prevents changes to this answer.

Question 33

Text 2

With thousands of options, how will you choose a career that's right for you? Would opting for the law field, since it has the highest earning potential, be the best choice? If you don't have any idea what you want to do, the task may seem insurmountable. Fortunately, it isn't. Follow an organic process to find the right career for you.

Before you can choose the right career, you must learn about yourself. Your values, interests, soft skills, and aptitudes are all important factors to consider. Make a list of occupations that are a good fit for you and others completely inappropriate. Use self-assessment tools and tests to gather information about your strengths and weaknesses. Once you have a clear understanding of your own needs and wants, you can start looking for careers that are a good fit. Some people choose to work with a career counselor or a mentor to get guidance and support.

If your reasons for finding a career unacceptable are non-negotiable, cross it off your list. Remove everything with duties that you don't enjoy or weak job outlooks. Get rid of any occupation if you are unable or unwilling to fulfill the educational or other requirements for it.

When you have only a few occupations left on your list, start doing more in-depth research. Arrange to meet with people who work in those fields to gain firsthand knowledge about the careers on your shortlist. Access your network, including LinkedIn, to find people who can provide valuable insights. Finally, after doing all your research, you are probably ready to make your choice. Pick the occupation that you think will be the best fit for you based on your interests and skills. Realize that you are allowed to change your mind if you change your mind about your choice at any point in your career.

What is the overall purpose of the article?

- Giving hints on how to forge a second career path
- Stating the facts for career development
- Setting the steps to choosing the right career
- Discouraging readers from following family traditions

Question 35

Kenya

Kenya is one of the forty-eight countries in Africa. It has endured drought, scarcity of food, and lots of disputes, but too regarded as a model for the future of the African continent. Rather than conventional sightseeing in Kenya, I will delve more than a hundred million. I will learn how water, new techniques for agriculture, good nourishment, education, and this region. I will check in on new technology that amps up growth and see how Kenya is becoming part of the global economy. development is working around the world.

Around a three-hour flight south of Madrid, Kenya, approximately the size of Spain, is the main country in the Horn of Africa. I Donyo Sabuk to explore the Athi River area, and then go to Bomas of Kenya to check out life in the European dependency. Along with hectic cities, Nairobi also has a rich and ancient heritage. Kenya is a country of many of the oldest Christian temples and chapels anywhere in Africa, a world-renowned tea tradition, and breathtaking natural beauty.

While Kenya has long been pegging away with indigence and famine, it is making roaring strides. And nowadays, countries with stable profits. Kenya's capital, Nairobi, is a city of over four and a half million people. It has a lot of energy: a lot of charm. However, Nairobi also has its topsy-turvy market scenes, little shanties, and teeming slums. Big cities like Nairobi have a lot of energy: a lot of charm. For poor countryside people, such a high-energy urban area with an enticing consumer community and office towers.

... can be described as crowded areas where poor people live.

- The Horn of Africa
- Hectic and depopulated cities
- Teeming slums.
- Roaring strides

Question 38

Kenya

Kenya is one of the forty-eight countries in Africa. It has endured drought, scarcity of food, and lots of disputes, but too regarded as a model for the future of the African continent. Along with hectic cities, Nairobi also has a rich and ancient heritage. Kenya is a country with some of the oldest Christian temples and chapels anywhere in Africa, a world-renowned tea tradition, and breathtaking landscapes.

While Kenya has long been pegging away with indigence and famine, it is making roaring strides. And no longer with stable profits. Kenya's capital, Nairobi, is a city of over four and a half million people. It has a lot of areas. For poor countryside people, such a high-energy urban area with an enticing consumer community.

What's described in the text as key to development?

Heritage

Education

Tradition

High prices

Question 51

Text 2

With thousands of options, how will you choose a career that's right for you? Would opting for the law field, since it's a good fit, be the best choice? If you don't have any idea what you want to do, the task may seem insurmountable. Fortunately, it isn't. Follow an outline to help you make a good decision:

Before you can choose the right career, you must learn about yourself. Your values, interests, soft skills, and aptitudes will help you find occupations that are a good fit for you and others. Use self-assessment tools and tests to gather information about your strengths and weaknesses. Some people choose to work with a career counselor.

If your reasons for finding a career unacceptable are non-negotiable, cross it off your list. Remove everything with weak job outlooks. Get rid of any occupation if you are unable or unwilling to fulfill the educational or other requirements.

When you have only a few occupations left on your list, start doing more in-depth research. Arrange to meet with professionals in those fields. They can provide firsthand knowledge about the careers on your shortlist. Access your network, including LinkedIn. Finally, after doing all your research, you are probably ready to make your choice. Pick the occupation that you think is the best fit for you based on your research and personal preferences.

Based on the reading, which would not be the following step in the process?

Letting the research about required education and training be a guide.

Identifying long and short-term goals to help chart a course.

Wondering if you lack some of the soft skills necessary to succeed.

Putting together a career action plan.

Question 60

A Truckers Tale.

It was an unusually warm January morning as we prepared for our upcoming trip. Our trucks were checked over, rumbling with anticipation to pull their heavy loads. There would be four trucks travelling together down the long, winding road from Fredericton to Brunswick. It was not a long trip, but at this time of year the roads and weather were equally unpredictable. The road was a steep, twisting, downhill grade that is considered dangerous in any season, let alone the winter. Many times we had to stop and wait for the other trucks to pass. We were prepared for anything.

As we climbed aboard our trucks a light snowfall began creating a light dusting on the road. Our big tire tracks in the snow started to fall heavier but still not a real concern. We had all driven through blizzards before.

The first three hours were uneventful, it had been a relaxing drive up until this point, but the Meductic hill descent. Suddenly, I heard a loud bang. I immediately thought I had blown a tire, but everything seemed fine. I had burst my main air brake line. I was now traveling at 90km per hour with no brakes. I had to come up with a plan to stop my truck and we had to do it fast. We decided that it was better to stop than to continue driving and risk hitting another truck. The other two trucks had stopped and I finally came to a stop.

Our trucks took some damage, and my nerves were rattled, but everyone was ok. We repaired the damage and continued on. At that moment everything was good, but who knows what lies ahead on this treacherous road.

In what season does the story take place?

Spring
 Summer
 Winter
 Fall

The Galápagos Islands

In the eastern Pacific Ocean, there is an archipelago of islands known as the Galápagos Islands. They are a part of Ecuador and located about 966 kilometers off the coast of Ecuador.

The Galápagos archipelago is composed of thirteen large islands and a few smaller ones. The largest of the islands is Isabela Island. The steep mountainous terrain of the Galápagos Islands was shaped by several volcanic eruptions.

Most people recognize the Galápagos for their wide variety of plant and animal species. Many species are endemic to the islands. These include the flightless cormorant, the marine iguana, the enormous Galápagos tortoise, and the Galápagos hawk.

The Galápagos Islands have a distinctive island ecosystem due to environmental factors. Despite being close to the equator, there is an odd blending of tropical and temperate climates. The islands have been incredibly remote for millions of years, which has led to a unique mix of plant and animal species.

For over 180 years, researchers have studied this intricate ecology. Charles Darwin, a British naturalist, is arguably the most famous visitor to the Galápagos. On board the HMS Beagle, Darwin made his first voyage to the Galápagos in 1835. His idea of evolution was born here, as he observed the different species of finches on the various islands. These days, researchers also focus on the aquatic ecosystems of the archipelago. Salome Ursula Burglass, a marine biologist, studies the deep-sea seamounts or underwater volcanoes of the Galápagos.

In which year did British naturalist Charles Darwin visit the Galapagos?

 1835
 1845
 1844
 1834

Question 66

The Galápagos Islands

In the eastern Pacific Ocean, there is an archipelago of islands known as the Galápagos Islands. They are a group of volcanic islands located about 966 kilometers off the coast of Ecuador.

The Galápagos archipelago is composed of thirteen large islands and a few smaller ones. The largest of the islands is Isabela. The steep mountainous terrain of the Galápagos Islands was shaped by several volcanic eruptions.

Most people recognize the Galápagos for their wide variety of plant and animal species. Many species are endemic to the islands. These include the flightless cormorant, the marine iguana, the enormous Galápagos tortoise, and the Galápagos hawk.

The Galápagos Islands have a distinctive island ecosystem due to environmental factors. Despite being close to the equator, the islands have a temperate climate. As a result, there is an odd blending of tropical and temperate climates. The islands have been incredibly remote for thousands of years, serving as a breeding ground for an uncommon mix of plant and animal species.

For over 180 years, researchers have studied this intricate ecology. Charles Darwin, a British naturalist, is arguably the most famous researcher to study the Galápagos Islands. On board the HMS Beagle, Darwin made his first voyage to the Galápagos in 1835. His idea of evolution by natural selection was developed from his observations of the unique species found on the islands.

These days, researchers also focus on the aquatic ecosystems of the archipelago. Salome Ursula Burglass, a marine biologist, has conducted research on the deep-sea seamounts and underwater volcanoes of the Galápagos.

Why was Ursula Burglass mentioned?

To display recent discoveries in the deep-sea seamounts.

To show Ursula Burglass has made more discoveries than Charles Darwin has.

To give an example of researchers that focus on underwater environments.

To support her idea of underwater volcano discoveries.
